AURORA VII

BATTLEFIELD CONDITIONS & TABLE CONSTRUCTION

Territory Guidelines with the 24 Canonical Reference Maps

THE MAPS ARE GUIDELINES - NOT MANDATORY TERRAIN PLACEMENTS

Build a balanced 48" x 48" Infinity N5 table first, then use the territory and its two maps to guide terrain type, density, route character, elevation and visual identity. A table may differ substantially from either map and still be correct if it preserves the territory character and the principles below.

Shared Table-Building Principles

- Provide several substantial total-cover positions in each deployment zone, including useful protection near the central third.
- Create multiple protected exits and interconnected approaches; avoid a single mandatory route or simple left/center/right lanes.
- Keep primary routes broad enough for TAGs and other large Silhouettes; narrow infantry gaps may exist but should not gate important areas.
- Use substantial terrain to control major Line of Fire. Scatter, vehicles, crates, barriers and foliage supplement - not replace - real blockers.
- Allow short, medium and controlled long sightlines appropriate to the territory; avoid clean deployment-zone-to-deployment-zone fire corridors.
- Keep common midfield objective locations usable and avoid one dominant central sniper position.
- Do not force every territory toward the same terrain density. Some Aurora VII battlefields are intentionally open, vertical, water-dominated or terrain-heavy.

1. NOVA PROSPECT | Pioneer's Landing | 3 VP

Aurora VII's colonial capital: permanent urban development, administration, communications and orbital supply operations.

1A - Administrative District

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

Dense civic blocks, administrative buildings and communications infrastructure. Use the map to capture a developed city with broken streets and strong building-to-building movement, not exact building locations.

- Favor substantial civic buildings and broad but interrupted streets.
- Keep the center developed without creating one dominant tower or fortress.
- Use buildings as primary LoF blockers; vehicles and street furniture are secondary.

1B - Orbital Logistics District

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A more open logistics campus with landing operations, warehouses, cargo handling and support infrastructure. The map demonstrates how open operational space can remain tactically protected.

- Include a landing or transfer area surrounded by substantial cover rather than a large open pad.
- Use warehouses, cargo-transfer facilities and support buildings without creating a container maze.
- Keep several broad routes for TAGs and freight movement.

2. KORIN RANGE | Dragon Gate Enclave | 3 VP

A severe mountain territory where research sites and transport routes are shaped by cliffs, passes and broken elevation.

2A - Research Valley

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A research installation embedded in rugged valley terrain, combining a scientific presence with multiple natural approaches.

- Favor irregular research structures integrated into the terrain rather than a rectangular compound.
- Provide routes through, under or around major structures and ridges.
- Accessible elevated positions should have more than one practical approach.

2B - High Pass

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A high-altitude crossing dominated by ridges, bridges and multiple passages through the mountains.

- Use major rock masses to define the battlefield without creating one mandatory pass.
- Include several ways through or around the ridge system; a bridge may be important but never the only route.
- Keep large-model passages broad enough for TAG movement.

3. CRYSTAL FRONTIER | Crystal Reach | 3 VP

Aurora VII's mineral frontier: fractured quarry terraces, blue-grey crystal ravines, extraction works and scattered research facilities.

3A - Faultline Works

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

An active quarry and processing site where stratified rock terraces, mineral pockets and industrial buildings shape the approaches.

- Use substantial quarry faces and workshops as the main Line of Fire blockers.
- Connect extraction equipment, conveyors, crushers and loading areas into a working site.
- Keep broad access cuts, protected approaches and usable midfield objective space.

3B - Rift Research Station

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A scientific campus around a diagonal blue-grey crystal ravine, with pale quartz formations, several bridges and irregular laboratory buildings.

- End the ravine inside the board and retain routes around both ends.
- Keep bridge decks and landings clear, with several practical crossing choices.
- Combine laboratory buildings, rock masses and quartz with connected approaches.

4. ECHO SHORES | Freeport Echo | 2 VP

A rough, improvised coastal trade zone of docks, warehouses, cranes, markets and black-market commerce.

4A - Dockside Operations

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A working waterfront broken into piers, dock sectors, warehouses and cargo-handling areas.

- Use water to shape the table without consuming too much playable ground.
- Provide multiple bridges, walkways or dock connections; no single crossing should be mandatory.
- Keep containers and cargo controlled enough that major buildings still define LoF geometry.

4B - Freeport Echo Market District

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A crowded frontier market of irregular shops, workshops, awnings, stalls and improvised structures.

- Favor irregular building footprints and interconnected passages over a clean city grid.
- Use stalls and awnings for texture, not as the only cover.
- Keep primary routes usable by large Silhouettes even though the district looks crowded.

5. HARMONY PROVINCE | Harmony City | 2 VP

Aurora VII's ordered civic center: planned public spaces, government architecture and O-12 security infrastructure.

5A - Government Plaza

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A formal civic district centered on an intentionally open public plaza.

- Preserve meaningful open civic space instead of filling the center with buildings.
- Use monuments, planters and offset government structures to create staged cover.
- Keep the table formal and monumental rather than dense and claustrophobic.

5B - O-12 Security District

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A controlled institutional campus containing security, communications, emergency and administrative facilities.

- Use several specialized institutional buildings rather than one giant headquarters.
- Break roads and courtyards with substantial structures and landscaped security features.
- Maintain multiple lateral and diagonal routes through the campus.

6. VERDE WILDS | Greenwood Station | 2 VP

A dense equatorial wilderness where scientific outposts and expedition routes are swallowed by native vegetation and waterways.

6A - Greenwood Station Jungle Outpost

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A scattered research outpost surrounded by dense jungle, rock masses and muddy clearings.

- Natural terrain should dominate; research buildings remain scattered.
- Use substantial jungle/rock masses as real LoF blockers rather than relying only on loose foliage.
- Keep broad, readable paths through the vegetation for large models.

6B - Greenwood River Crossing

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A river-dominated jungle battlefield of islands, bridges and isolated scientific positions.

- Use several crossings at different depths so the river creates choices rather than a single choke point.
- Treat jungle-covered islands and rock masses as major terrain anchors.
- Preserve the unusual water-network identity instead of converting it into a conventional land table.

7. AZURE COAST | Port Meridian | 2 VP

Aurora VII's modern maritime logistics region: clean port infrastructure, customs facilities, maintenance and intermodal transport.

7A - Port Meridian Harbor Approach

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A clean harbor approach with waterfront structures, customs, maintenance and cargo handling.

- Keep a recognizable coastline or harbor edge while retaining ample playable land.
- Use substantial port buildings and cargo compounds to interrupt broad harbor roads.
- Make the table cleaner and more organized than Echo Shores.

7B - Port Meridian Intermodal Terminal

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

An inland road/logistics terminal built around customs, inspection, transfer and dispatch facilities.

- Favor distinct functional buildings around an irregular road network.
- Break long road corridors with inspection structures, cargo masses and service facilities.
- Keep the emphasis on road freight and logistics rather than rail or maritime infrastructure.

8. EMBER HIGHLANDS | Red Mesa | 1 VP

A harsh volcanic highland frontier of dark red rock, monumental mesas, isolated settlement and geothermal activity.

8A - Red Mesa Settlement

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A small frontier settlement threaded through enormous mesas and canyon-like routes.

- Natural geology should visually dominate the settlement.
- Use massive mesa formations as primary LoF blockers while preserving branching routes around them.
- Keep habitation and utility buildings small relative to the landscape.

8B - Geothermal Badlands

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A lower, more fractured volcanic field with geothermal machinery, vents and localized pipe networks.

- Favor irregular ridges and broken volcanic formations rather than giant flat mesas.
- Use geothermal machinery as secondary terrain embedded in the geology.
- Keep pipes broken and crossable; do not create industrial walls.

9. SULFUR BASIN | Helios Extraction Complex | 1 VP

A chemically scarred industrial territory ranging from dense refining infrastructure to exposed sulfur-mining fields.

9A - Helios Refinery

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A dense processing complex of refinery structures, tanks, machinery and broken pipe systems.

- Use several distributed industrial masses rather than one giant central refinery.
- Keep pipeline networks crossable and avoid long continuous pipe walls.
- Create an industrial labyrinth with multiple TAG-capable routes and controlled service corridors.

9B - Helios Extraction Fields

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

An open sulfur-mining frontier of natural formations, drilling sites, pumping equipment and short pipeline networks.

- Natural terrain should provide most major LoF blocking; extraction machinery is distributed and secondary.
- Keep the table visually open while providing progressive substantial cover across exposed ground.
- Use fewer, larger natural formations rather than filling the table with small rocks.

10. FROSTREACH WASTES | Frosthold | 1 VP

Aurora VII's polar frontier: ice masses, snow fields, survival infrastructure and isolated expedition sites.

10A - Frosthold Wastes

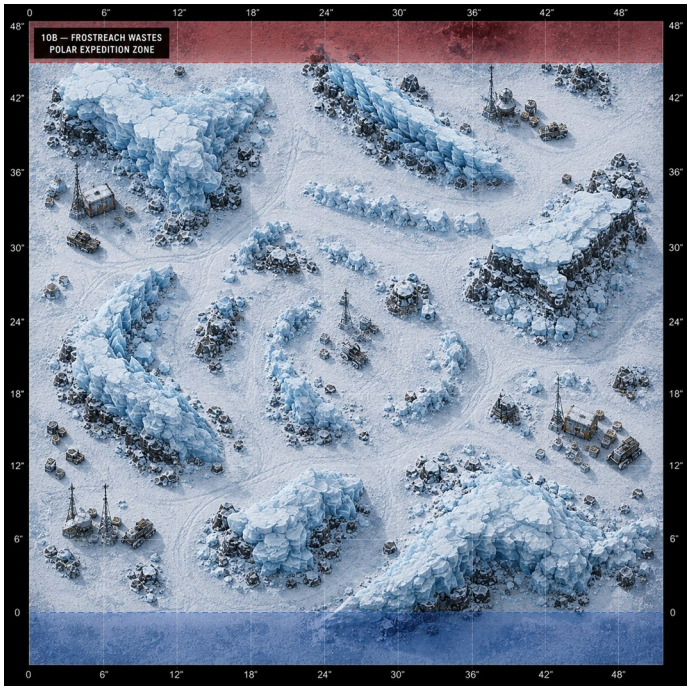

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A compact polar settlement or survival installation protected by large ice formations.

- Use substantial glaciers and ice/rock masses as primary LoF blockers.
- Keep the settlement compact and subordinate to the frozen landscape.
- Preserve several broad routes around and between the ice formations.

10B - Polar Expedition Zone

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

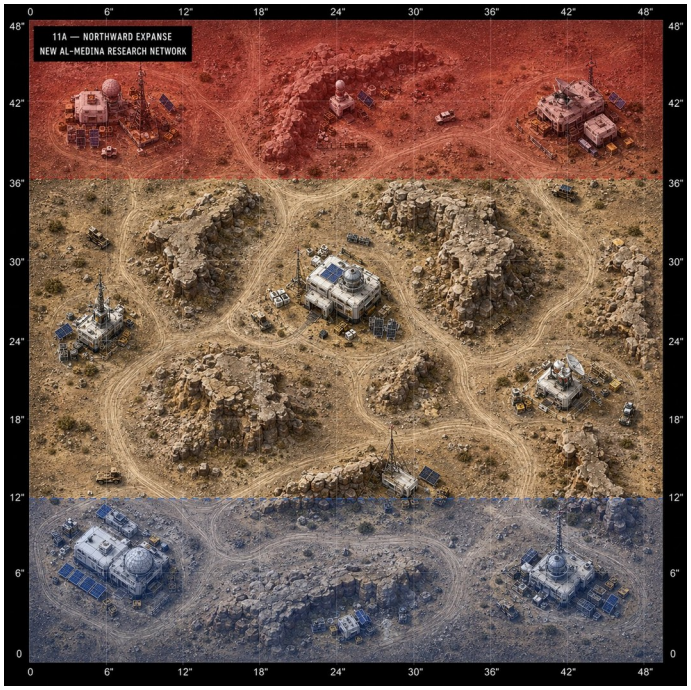

A much more open polar wilderness containing only sparse expedition equipment.

- Natural ice terrain should overwhelmingly dominate the table.
- Use large distributed formations to make apparent open ground tactically crossable.
- Human infrastructure should look temporary, isolated and minimal.

11. NORTHWARD EXPANSE | New Al-Medina | 1 VP

A remote dry scientific frontier, from established research stations to the edge of the mapped world.

11A - New Al-Medina Research Network

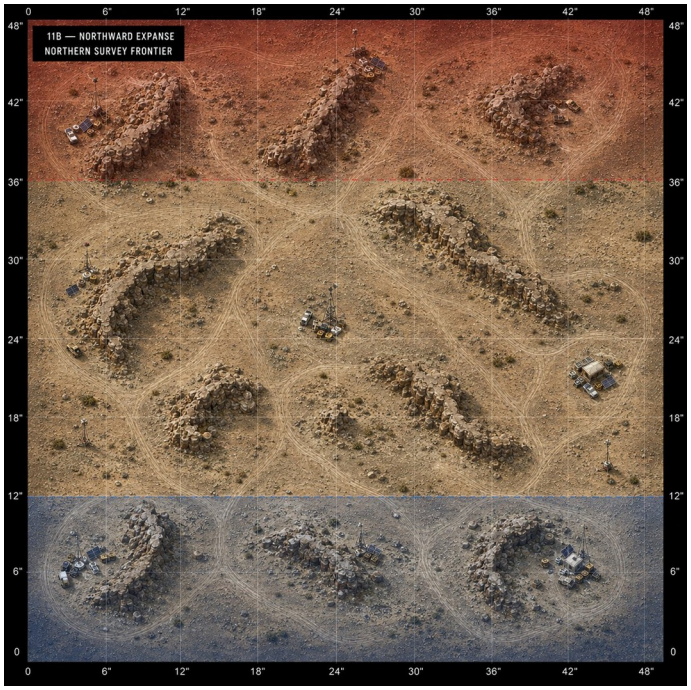

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A distributed network of permanent scientific sites across broad wind-eroded terrain.

- Natural ridges and outcrops remain the primary battlefield terrain.
- Use several distinct research functions and footprints rather than repeating one prefab building.
- Preserve the broad open-frontier appearance while maintaining protected movement between stations.

11B - Northern Survey Frontier

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

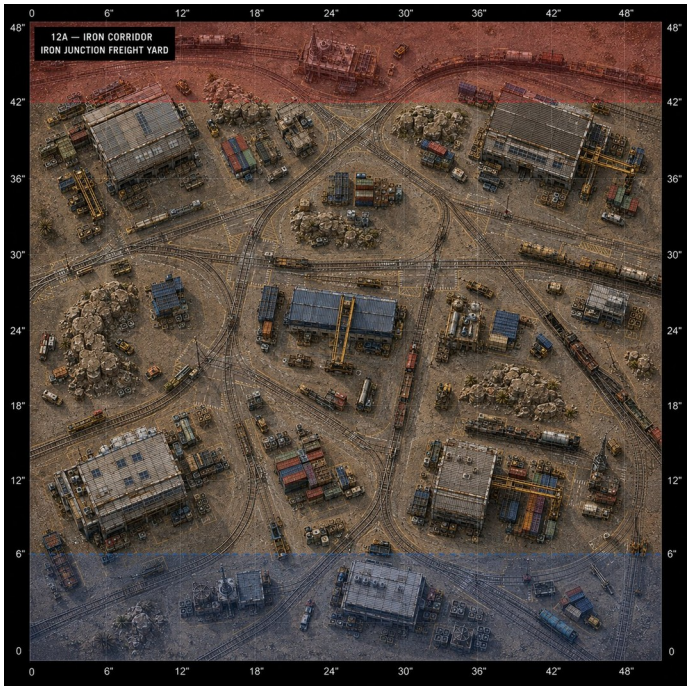

The edge of mapped territory: overwhelmingly natural terrain with tiny temporary survey camps.

- Keep permanent human infrastructure extremely limited.
- Use substantial eroded ridges and outcrops to create a hidden network of safe approaches.
- The table should look significantly more isolated and less developed than the Research Network.

12. IRON CORRIDOR | Iron Junction | 1 VP

Aurora VII's heavy rail-transportation region, spanning freight switching, maintenance, inspection and transit service.

12A - Iron Junction Freight Yard

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A sprawling freight-switching landscape of branching tracks, sidings, warehouses and cargo-transfer areas.

- Railways should weave through the table rather than form one barrier dividing it.
- Provide many broad crossings and service-road transitions.
- Use distributed freight buildings, cargo areas and occasional low natural terrain; freight cars are supplementary cover.

12B - Transit & Maintenance Hub

REFERENCE MAP - TERRAIN LANGUAGE & GEOMETRY GUIDE

A concentrated but distributed campus of maintenance, inspection, repair, dispatch and transit-service facilities.

- Facilities, not the rail network, should be the primary visual and tactical elements.
- Avoid a giant central terminal or hub-and-spoke layout.
- Use localized service tracks, open maintenance yards and multiple interconnected routes between specialized buildings.

Using the Reference Maps Correctly

The 24 maps define Aurora VII's battlefield language, not a fixed tournament terrain pack. A GM may rotate, mirror, substitute or redesign terrain so long as the resulting table remains a balanced Infinity battlefield and clearly belongs to the selected territory.

- Copy the character, not the coordinates.
- Copy the route logic, not the exact footprints.
- Preserve the A/B distinction, but feel free to create additional layouts that fit the same territory.
- Keep major terrain substantial enough to matter; do not substitute decorative scatter for true LoF blockers.
- When a reference map is intentionally open or unusual, preserve that character instead of normalizing it toward a dense urban table.
